

3- Signs and symptoms of peritonitis are all except.

- a) paresthesia
- b) abdominal pain or tenderness
- c) fever
- d) no passage of gas

4- All the following are causes of fracture except.

- a) a direct blow
- b) crushing force
- c) congenital
- d) sudden twisting motion

5- Method of external fixation include:

- a) screws
- b) nails
- c) wires
- d) casts

6- late complications of fracture is:

- a) delayed union
- b) shock
- c) compartment syndrome
- d) fat embolism

7- Exogenous osteomyelitis are all the following except .

- a) skeletal traction
- b) open fracture
- c) infected teeth
- d) gunshot wound

8- General manifestation of osteomyilities is:

- a) the onset is usually sudden
- b) pulsating pain that interfere with movement
- c) swollen
- d) area painful and tender to touch

9- Symptoms of inguinal hernia are all except:

- a) discomfort or sharp pain
- b) feeling of weakness or pressure in the groin
- c) weight gain
- d) aching feeling at the bulge

- (6) sudden impaction of an embolism in a narrow blood vessels.
- (7) are muscle edema that result from prolonged ischemia.
- (8) sever burning pain caused by nerve ischemia, aggravated by elevation, and relieved by lowering the leg.
- (9) the angle at which the limb become pale on elevation
- (10) painful blue swelling
- (11) complete disruption of an abdominal incision in the early postoperative period
- (12) is application of a pulling force to part of the body
- (13) is an infection of the bone
- (14) is a protrusion of the nucleus valvulus into the amniulus fibrous with nerve compression.
- (15) autoimmune disease initiated by IgG against portion of TSH receptors on a previous normal gland.
- (16) a rigid external immobilizing device that is molded to the contours of the body to which it is applied
- (17) is a name of open hernia repair surgery
- (18) telescoping of a portion of the intestine into another portion
- (19) it is a stone in the urinary tract formed when urinary concentration of substances as calcium oxalate increase.
- (20) this is a painless technique that uses high frequency sound waves.

Fourth question:- (10 degree)
Complete the following

1- Complications of acute limb ischemia are.

- a)-----
- b)-----
- c)-----
- d)-----

2- Characteristics of intermittent claudications.

-
-
-

3- Clinical manifestations of musculoskeletal trauma are

- a)
- b)
- c)

4- Etiology of fracture are

- 1-----
- 2-----
- 3-----

5- Principles of fracture management are

- 1-----
- 2-----
- 3-----

GOOD LACK
DR: ZEINAB ALI

Fourth question:- (10 degree)
Complete the following

1- Complications of acute limb ischemia are.

- a)-----
- b)-----
- c)-----
- d)-----

2- Characteristics of intermittent claudications.

-
-
-

3- Clinical manifestations of musculoskeletal trauma are

- a)
- b)
- c)

4- Etiology of fracture are

- 1-----
- 2-----
- 3-----

5- Principles of fracture management are

- 1-----
- 2-----
- 3-----

GOOD LACK
DR: ZEINAB ALI

10- The following factor is post operative cause for incisional hernia.

- a) obesity
- b) diabetes mellitus
- c) wound infection
- d) muscle cutting

11- the most common cause of obstruction of hernia is

- a) protrusion of new content
- b) adhesions between content
- c) scar
- d) cutting of blood supply

12- indication of lumbar sympathectomy is

- a) intermittent claudication
- b) gangrene
- c) after amputation
- d) ischemia

13- predisposing factors for atherosclerosis

- a) smoking
- b) obesity
- c) hypertension
- d) diarrhea

14- the following are s & s of skin strophic except.

- a) thin tapering toes
- b) brittle nails
- c) subcutaneous fat loss
- d) vomiting

15- The cause of chronic ischemia .

- a) Embolism
- b) Burger's disease
- c) Arteritis
- d) D.M

16- diagnostic evaluation of fracture are all the flowing except.

- a) symptoms of patients
- b) physical signs
- c) mammography
- d) x-ray

F. J. S. 1/1/10

10- The following factor is post operative cause for incisional hernia.

- a) obesity
- b) diabetes mellitus
- c) wound infection
- d) muscle cutting

11- the most common cause of obstruction of hernia is

- a) protrusion of new content
- b) adhesions between content
- c) scar
- d) cutting of blood supply

12- indication of lumbar sympathectomy is

- a) intermittent claudication
- b) gangrene
- c) after amputation
- d) ischemia

13- predisposing factors for atherosclerosis

- a) smoking
- b) obesity
- c) hypertension
- d) diarrhea

14- the following are s & s of skin strophic except.

- a) thin tapering toes
- b) brittle nails
- c) subcutaneous fat loss
- d) vomiting

15- The cause of chronic ischemia .

- a) Embolism
- b) Burger's disease
- c) Arteritis
- d) D.M

16- diagnostic evaluation of fracture are all the flowing except.

- a) symptoms of patients
- b) physical signs
- c) mammography
- d) x-ray

F. J. S. 1/1/10

17) All the following are principles of effective traction except

- a)-skeletal traction is never interrupted
- b) weighty must hang free
- c)- ropes must be unobstructed
- d) change patients position

18)- The factors that leads to worseness or recurrence of hernia are all except

- a) lifting heavy object
- b) chronic cough
- c) heavy meals
- d) straining

19) predisposing factors for acute ischemia are all except

- a)phlegmoma alba dolena
- b) embolism
- c)vasospastic disease
- d) thrombosis

20) phases of wound healing are all except

- a) contraction
- b) granulation
- c) fibrous tissue formation
- d) dilatation

Third Question: (20 degree)

Put the suitable answer

(1)-----is a type of injury that may caused by heat, cold, chemical, electrical, light radiation or friction

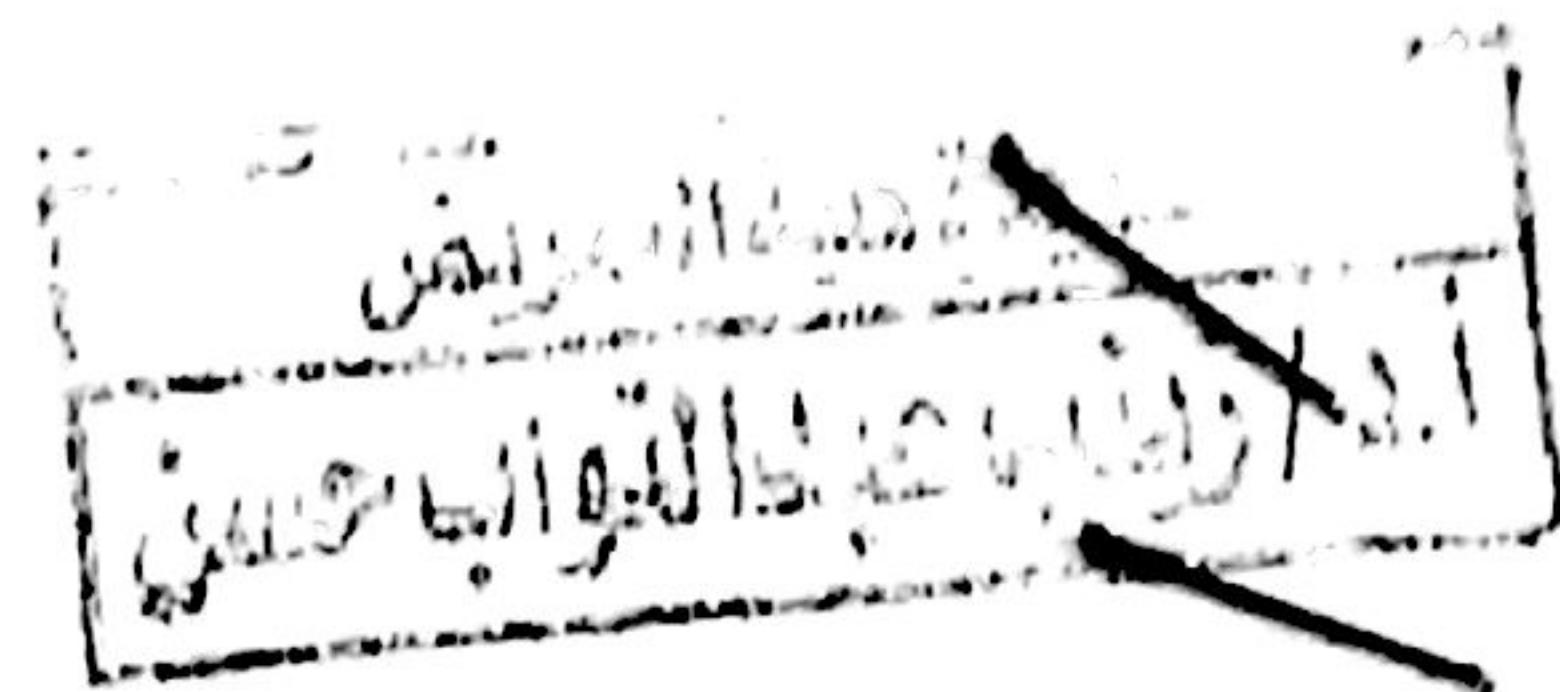

(2) -----is a hard leather like Escher, purple fluid, and no sensation

(3) -----is considered a consensus formula

(4)-----is a localized collection of blood due to rupture of a sensible vessels

(5) ----- is a diminished of blood supply to the extent of impairing nutrition and unction of an organic or limb.

Rashed

(10 degree)

Mr. Ali admitted to the hospital complain of inability to urination, pain, fever, chills and dysuria on examination there was cystitis, distention on the renal pelvis and increase in the hydrostatic pressure.

- 1- medical diagnosis for Mr. Ali is-----
- 2- draw a nursing care plane for Mr. Ali?
- 3- describe a discharge plane for Mr. Ali ?

(15 degree)

Mr. Ala admitted to the hospital complain of pain and stiff of the neck and top of his shoulder and in the region of the scapula, parathesia, numbness on the upper extremities and head. His doctor put prepared him for surgery.

- 1- medical diagnosis for Mr. ala is-----
- 2- diagnostic tests for Mr. ala are
 - a)-----
 - b)-----
 - c)-----
 - d)-----
- 2- nursing management following surgery will be?
- 3- describe a discharge plane for Mr. Ali ?

Second question, (20 degree)

Select the correct answer

1- Common types of toxic goiter are the following except.

- a) primary toxic goiter.
- b) diffuse toxic goiter.
- c) Graves disease.
- d) simple goiter

2- All the following are the mechanical causes of intestinal obstruction except.

- a) Hernia
- b) adhesion
- c) tumors
- d) diverticulitis
